GAS/AIR FLOW OPTIMIZATION

LG conventional dryers control air and gas flow by turning the unit ON and OFF. LG commercial dryers allocate the appropriate amount of gas and air in several phases to control air flow. This significantly increases energy efficiency.

EXCELLENT DRY PERFORMANCE

A new, wider fan increases airflow to dry clothes more quickly, which improves drying performance and energy efficiency.

HEAVY DUTY MOTOR

LG commercial dryers also incorporate a durable motor which improves the airflow and heating system. This results in better drying performance and increased drying capacity.

EASY PROGRAMMING

Intuitive programming controls allow operators to choose from a variety of functions and programs, including price, cycle time, cycle parameters, spin-speed and more, ensuring that all washing requirements are met.
